Offshore Well Records now stored at Keyworth

Despite the difficulties caused by the severe winter weather the hard copy DECC Offshore Well record collection was successfully transferred from Gilmerton to Keyworth and the move completed before Christmas 2010. There were a total of 14,774 boxes (from 8347 wells) which had all been sorted, catalogued and bar-coded before the transfer. They are now stored in the new facility at Keyworth, joining the 1345 boxes (from 1730 wells) of onshore well records transferred in 2008. Access constraints remain the same as when the records were housed in Gilmerton.

Pallets of records stored in new facility

First load arrives at Keyworth 15/10/2010
